John R. Stewart

An Evolutionary Study of Some Archaeologically Significant Avian Taxa in the Quaternary of the Western Palaearctic (British Archaeological Reports British Series) John R. Stewart

This work sets out to examine four taxa of birds from the Quaternary of Europe that exhibit interesting morphological anomalies cranes (*Grus*), grouse/ptarmigans (*Lagopus*), ravens (*Corvus corax*) and starlings (*Sturnus*) to address whether these were the result of inter- or intraspecific processes. Modern skeletal material of these taxa from a wide geographical area was examined so as to make a more realistic assessment of the fossils than had previously been achieved. Similarly, fossils were studied from a wider geographical and temporal range than before. The study of the four chosen taxa was carried out with an acknowledgement of a variety of theoretical issues in biology, which affect the interpretation of such fossils.
