## Carcinoma of the Oral Cavity and Oropharynx (Recent Results in Cancer Research)

In spite of great advance made by ENT and maxillofacial surgeons as well as radiotherapists to improve therapy of cancer of the oral cavity and oropharynx, it has not been possible in the past 4 decades to raise the chances of patient survival above 40%-45%. However, recent studies with different combination therapies indicate that better results can be expected in the future. In this volume, the current status and results of therapeutic studies are presented by distinguished clinicians in the three disciplines. The book provides up-to-date information and encourages interdisciplinary cooperation.
