Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series) Andreas Wienke

The concept of frailty offers a convenient way to introduce unobserved heterogeneity and associations into models for survival data. In its simplest form, frailty is an unobserved random proportionality factor that modifies the hazard function of an individual or a group of related individuals. **Frailty Models in Survival Analysis** presents a comprehensive overview of the fundamental approaches in the area of frailty models.

The book extensively explores how univariate frailty models can represent unobserved heterogeneity. It also emphasizes correlated frailty models as extensions of univariate and shared frailty models. The author analyzes similarities and differences between frailty and copula models; discusses problems related to frailty models, such as tests for homogeneity; and describes parametric and semiparametric models using both frequentist and Bayesian approaches. He also shows how to apply the models to real data using the statistical packages of R, SAS, and Stata. The appendix provides the technical mathematical results used throughout.

Written in nontechnical terms accessible to nonspecialists, this book explains the basic ideas in frailty modeling and statistical techniques, with a focus on real-world data application and interpretation of the results. By applying several models to the same data, it allows for the comparison of their advantages and limitations under varying model assumptions. The book also employs simulations to analyze the finite sample size performance of the models.

From reader reviews:

Eden Davis:

Have you spare time for the day? What do you do when you have much more or little spare time? Yeah, you can choose the suitable activity for spend your time. Any person spent all their spare time to take a walk, shopping, or went to the Mall. How about open or even read a book called Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series)? Maybe it is to become best activity for you. You understand beside you can spend your time together with your favorite's book, you can more intelligent than before. Do you agree with its opinion or you have some other opinion?

Lisa Vazquez:

What do you concentrate on book? It is just for students since they're still students or the item for all people in the world, the actual best subject for that? Just simply you can be answered for that problem above. Every person has different personality and hobby for every single other. Don't to be compelled someone or something that they don't desire do that. You must know how great in addition to important the book Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series). All type of book can you see on many resources. You can look for the internet resources or other social media.

Mable Watkins:

Here thing why this specific Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series) are different and reputable to be yours. First of all reading a book is good nevertheless it depends in the content from it which is the content is as scrumptious as food or not. Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series) giving you information deeper including different ways, you can find any reserve out there but there is no reserve that similar with Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series). It gives you thrill studying journey, its open up your eyes about the thing that will happened in the world which is probably can be happened around you. It is easy to bring everywhere like in area, café, or even in your method home by train. For anyone who is having difficulties in bringing the paper book maybe the form of Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series) in e-book can be your substitute.

Tommy Bowles:

Reading a book to become new life style in this 12 months; every people loves to read a book. When you learn a book you can get a lots of benefit. When you read publications, you can improve your knowledge, because book has a lot of information in it. The information that you will get depend on what types of book that you have read. If you wish to get information about your study, you can read education books, but if you want to entertain yourself read a fiction books, this sort of us novel, comics, and soon. The Frailty Models in Survival Analysis (Chapman & Hall/CRC Biostatistics Series) provide you with a new experience in reading a book.
