Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series)

Gerald J. Kowalski, Mark T. Maybury

Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series) Gerald J. Kowalski, Mark T. Maybury

Chapter 1 places into perspective a total Information Storage and Retrieval System. This perspective introduces new challenges to the problems that need to be theoretically addressed and commercially implemented. Ten years ago commercial implementation of the algorithms being developed was not realistic, allowing theoreticians to limit their focus to very specific areas. Bounding a problem is still essential in deriving theoretical results. But the commercialization and insertion of this technology into systems like the Internet that are widely being used changes the way problems are bounded. From a theoretical perspective, efficient scalability of algorithms to systems with gigabytes and terabytes of data, operating with minimal user search statement information, and making maximum use of all functional aspects of an information system need to be considered. The dissemination systems using persistent indexes or mail files to modify ranking algorithms and combining the search of structured information fields and free text into a consolidated weighted output are examples of potential new areas of investigation. The best way for the theoretician or the commercial developer to understand the importance of problems to be solved is to place them in the context of a total vision of a complete system. Understanding the differences between Digital Libraries and Information Retrieval Systems will add an additional dimension to the potential future development of systems. The collaborative aspects of digital libraries can be viewed as a new source of information that dynamically could interact with information retrieval techniques.

From reader reviews:

Effie Peoples:

The book Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series) will bring one to the new experience of reading some sort of book. The author style to explain the idea is very unique. Should you try to find new book to study, this book very suitable to you. The book Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series) is much recommended to you you just read. You can also get the e-book from your official web site, so you can quicker to read the book.

Martin Norwood:

Your reading sixth sense will not betray an individual, why because this Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series) reserve written by well-known writer we are excited for well how to make book which can be understand by anyone who also read the book. Written with good manner for you, leaking every ideas and producing skill only for eliminate your hunger then you still hesitation Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series) as good book not simply by the cover but also by the content. This is one publication that can break don't determine book by its cover, so do you still needing a different sixth sense to pick this kind of!? Oh come on your reading through sixth sense already said so why you have to listening to one more sixth sense.

Jessica Henriquez:

Is it a person who having spare time in that case spend it whole day by means of watching television programs or just lying down on the bed? Do you need something totally new? This Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series) can be the reply, oh how comes? A fresh book you know. You are so out of date, spending your spare time by reading in this new era is common not a nerd activity. So what these publications have than the others?

Michael Wheeler:

Reading a publication make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is composed or printed or descriptive from each source this filled update of news. In this modern era like today, many ways to get information are available for an individual. From media social like newspaper, magazines, science e-book, encyclopedia, reference book, new and comic. You can add your understanding by that book. Ready to spend your spare time to spread out your book? Or just looking for the Information Storage and Retrieval Systems: Theory and Implementation (The Information Retrieval Series) when you needed it?
