The Origin Of Plants Maggie Campbell-Culver

A fascinating history of Britain's plant biodiversity and a unique account of how our garden landscape has been transformed over 1000 years, from 200 species of plant in the year 1000 to the astonishing variety of plants we can all see today. Thousands of plants have been introduced into Britain since 1066 by travellers, warriors, explorers and plant hunters - plants that we now take for granted such as rhododendron from the Far East, gladiolus from Africa and exotic plants like the monkey puzzle tree from Chile.

Both a plant history and a useful reference book, Maggie Campbell-Culver has researched the provenance and often strange histories of many of the thousands of plants, exploring the quirky and sometimes rude nature of the plants, giving them a personality all of their own and setting them in their social context.

The text is supported by beautiful contemporary paintings and modern photographs in 2 x 8 pp colour sections.
