High-Performance Energy-Efficient Microprocessor Design (Integrated Circuits and Systems) Vojin G. Oklobdzija, Ram K. Krishnamurthy

Microprocessors of today contain close to a billion transistors, while achieving the performance of supercomputers just a decade ago. Designing such processors takes hundreds of people organized into large teams. High Performance Energy Efficient Microprocessor Design is written by the world's most prominent microprocessor design leaders from the industry and academia. It provides a complete coverage of all the aspects of a complex microprocessor design process from technology, power management, clocking, high-performance architecture, design methodologies, memory and I/O design, computer aided design, testing and design for testability. The chapters are written to provide the latest state of the art knowledge of particular aspects of microprocessor design, while including sufficient tutorial content in order to bring non-experts up to speed. High Performance Energy Efficient Microprocessor Design is intended to be a useful companion book for every design engineer working in the related areas and a source of technical information as well as a comprehensive reference in the field. It should also serve as the source book for technical and business managers involved in microprocessor based design and manufacture. The chapters are organized in a way which makes it possible to use this book as a textbook for graduate courses in advanced digital and system design. The book is intended to highlight practical problems encountered in designing state of the art processors, while yet covering fundamental principles that are independent of technology.

From reader reviews:

Joanne Starks:

Do you have favorite book? When you have, what is your favorite's book? E-book is very important thing for us to learn everything in the world. Each guide has different aim or even goal; it means that publication has different type. Some people truly feel enjoy to spend their the perfect time to read a book. They are reading whatever they take because their hobby is usually reading a book. Think about the person who don't like reading a book? Sometime, individual feel need book after they found difficult problem or perhaps exercise. Well, probably you will require this High-Performance Energy-Efficient Microprocessor Design (Integrated Circuits and Systems).

Connie Medina:

Playing with family in a park, coming to see the sea world or hanging out with friends is thing that usually you will have done when you have spare time, after that why you don't try thing that really opposite from that. One activity that make you not experience tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of information. Even you love High-Performance Energy-Efficient Microprocessor Design (Integrated Circuits and Systems), you may enjoy both. It is very good combination right, you still desire to miss it? What kind of hang-out type is it? Oh can occur its mind hangout guys. What? Still don't get it, oh come on its named reading friends.

Trina Durham:

Don't be worry for anyone who is afraid that this book may filled the space in your house, you will get it in e-book means, more simple and reachable. This specific High-Performance Energy-Efficient Microprocessor Design (Integrated Circuits and Systems) can give you a lot of good friends because by you checking out this one book you have issue that they don't and make you actually more like an interesting person. This book can be one of one step for you to get success. This book offer you information that might be your friend doesn't recognize, by knowing more than some other make you to be great individuals. So , why hesitate? Let me have High-Performance Energy-Efficient Microprocessor Design (Integrated Circuits and Systems).

James Martin:

As a college student exactly feel bored in order to reading. If their teacher questioned them to go to the library or make summary for some publication, they are complained. Just very little students that has reading's heart or real their pastime. They just do what the educator want, like asked to the library. They go to generally there but nothing reading really. Any students feel that reading is not important, boring and also can't see colorful pics on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this era, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore , this High-Performance Energy-Efficient Microprocessor Design (Integrated Circuits and Systems) can make you sense more interested to read.
